01
*How might we design
to use minimal energy
during use?*

01
*What is the most
simple solution?*

01
*How might we
incorporate bio-based
materials?*

01
*How can we ensure the
solution works with
standard products?*

02
*How might we design
to encourage repair?*

02
*How might we
encourage users to
repeatedly use this?*

02
*How might we make
this design modular?*

02
*How can we ensure
that users feel
empowered to repair
the design?*

03
*How might we develop
better systems around
this solution?*

03
*How might we ensure
that we have an ethical
supply chain?*

03
*What would this
solution be like if it was
offered as a service?*

03
*How might we develop
the idea to encourage
more sustainable use
behaviours?*

01
*How might we reduce
the volume of
materials used making
the solution?*

01
*How might we make
the solution part of a
circular design loop?*

01
*How can we design this
so it comes apart
easily?*

01
*How might we design
to use minimal energy
during use?*

02
*How can we ensure
that the user
understands when and
how to maintain it?*

02
*How can we support
the community to
repair and maintain the
solution?*

02
*How might we help the
user better achieve
their task goals?*

02
*How might we design
to encourage repair?*

03
*How might we make
the solution usable as
society and culture
develops?*

03
*How can we promote
responsible and equal
use with the solution?*

03
*How can we leverage
the power of open
source community
development?*

03
*How might we develop
better systems around
this solution?*

01 How might we make sure that the design can be recycled?

01 How can we use as little material as possible?

01 How can we reduce waste in manufacture and use to zero?

01 How can we make the design as light as we can?

02 How might we ensure that this solution works for everyone involved?

02 How can we make sure that the solution can be used by different types of users?

02 How might we reduce a mismatch between the solution and the user interactions?

02 How might we develop the solution with the community?

03 How can we ensure that anyone can learn how to make this?

03 How can we make the solution unique to the user?

03 How could this idea be implemented without instructions or a manual?

03 How can we encourage the idea to be shared amongst the community?

01 How can we reduce the solution to the bare minimum to function?

01 How can we ensure the design doesn't break during use?

01 How can we encourage the user to love the idea?

01 How might we encourage users to still be using this design in 100 years?

02 How might we design it so that operation and maintenance are understandable to all?

02 How can we design the solution so it can be made only when it's required?

02 How can we design the solution so it can be made in multiple locations at once?

02 How can we design the solution so that it can be made as close to the user as possible?

03 How can we develop a maker community to support this solution?

03 How can we only use one material in the manufacture of the solution?

03 How can we make the solution easy for anyone to use?

03 How can we ensure that everybody can equitably benefit from this solution?

01

How can we make the idea compatible with other things found in it's environment?

01

How might we future proof the solution?

?

COMBINE

?

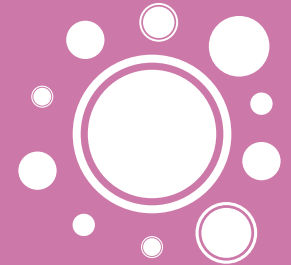

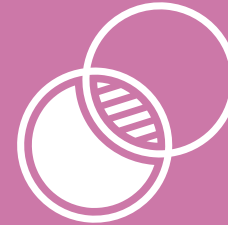

MODIFY

02

How can we use materials from the local area?

02

How can we develop this solution to provide local job opportunities

03

How can we reduce the number of parts or components in the solution system?

03

How can we ensure materials and systems in the design are visible and unobscured?

How can I combine two or more parts or sections to create a new solution?

What can have more or less emphasis in the solution?

01

How can we make the solution as useful as it could possibly be?

?

SUBSTITUTE

?

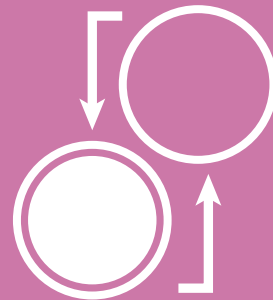

ADAPT

?

PUT TO ANOTHER USE

02

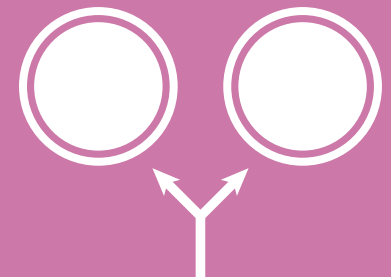

How can we embed the solution deep within the local community?

What can be substitute or changed in my solution?

What can be adapted in the solution?

What are new ways to use the solution?

03

How can we make the solution as functional as possible?
